PROJECTS

Ecommerce website MERN   source   view

Backend

- Implementation of authentication en el proceso de log in using json web tokens .
- Creation of user accounts and encryption of passwords with Cryptojs library.
- Use of middlewares to check if the token is valid, to know if it is an administrator or a user
- Payment management through stripe library.
- Use of RESTAPI methods, CRUD with models Cart, Products, User, Orders.

Frontend

- Creating components using styled components and handling Apicalls using axios.
- Global state handling using ReduxToolkit and redux persist to save the state in the browser.
- Responsive design for mobile and use of flexbox for system design.
- List products, see a product, add to cart, make a purchase, register and start a session interfaces that the user can see.

Chat real time website MERN   source   view

Backend

- Creation of user accounts and encryption of passwords with Bycript library.
- Saving images on the server using multer.
- Use of RESTAPI methods, CRUD with models: User, Post, Conversations, Messages.
- Socke.io library in the backend to do real time chat on my website.

Frontend

- Creating components using function-based components, css styles in separate files.
- Handling Apicalls using axios library .
- Global state handling using ContextAPI and Localstorage to save the state in the browser.
- Messenger page to start chat with other users: see connected users, start a new conversation with a friend.
- Follow a user, like an image or upload a publication, actions that a user can perform once you log in.

EDUCATION

Systems engineering from the National University of San Agustin
